

Zeid Aldaas

(951) 410-7430 | aldaaszeid@yahoo.com | zaldaas.com | linkedin.com/in/zaldaas | github.com/Zaldaas

EDUCATION

California State University, Fullerton

B.S. Computer Science | January 2023 - May 2025 | GPA: 3.73

EXPERIENCE

Data Engineer

SonarX | Irvine, CA | June 2025 - Present

- Designed and deployed scalable ETL/ELT pipelines in Python and SQL to ingest, normalize, and transform blockchain data across 100+ chains, ensuring high data quality and pipeline reliability
- Built and optimized cloud data infrastructure on AWS and Snowflake, enabling real-time and historical on-chain analytics at scale while reducing compute costs through query tuning and warehouse optimization
- Partnered with data engineering and client-facing teams to model domain-specific blockchain datasets, improving data accessibility for compliance, analytics, and product use cases
- Implemented data quality checks and monitoring to proactively detect pipeline failures, schema drift, and anomalous data across ingestion workflows

Full Stack Developer

Stealth Startup | Remote | March 2025 - June 2025

- Developed and maintained a full-stack healthcare EDI application using Django and Vue.js, with emphasis on reliable data exchange and X12 standards compliance
- Designed and optimized secure RESTful APIs handling structured healthcare data ingestion and transformation, ensuring data integrity across transactional workflows
- Contributed to product architecture decisions in an agile environment, delivering end-to-end features that streamline EDI data parsing and reporting

Data Automation Developer

Edwards Lifesciences | Irvine, CA | September 2024 - May 2025

- Led cross-functional development of DSC PhasePro, a Python-based data automation tool that streamlined complex DSC scientific data analysis workflows, cutting analysis time by over 50% and eliminating manual error
- Engineered advanced data processing pipelines and algorithms to automatically detect overlapping phase transitions and extract precise thermodynamic metrics (transformation temperatures, enthalpies) with high reproducibility
- Built an interactive data visualization interface enabling scientists to explore, edit, search, and export processed DSC results, integrating seamlessly into existing R&D workflows

PROJECTS

AI Rate My Professor | *Python, Next.js, AWS, Pinecone, RAG* | [View Code](#)

- Built an AI-powered chatbot using a RAG pipeline with OpenAI embeddings and a Pinecone vector database that helps students find and compare professors by teaching style and ratings, deployed on AWS EC2

College Database Website | *TypeScript, SQL, PHP, React, Laravel, REST APIs* | [View Demo](#), [View Code](#)

- Designed and built a web application for managing university data (professors, courses, students, enrollments) with a relational database schema and REST API layer supporting full CRUD operations and complex queries

SportSpot | *Java, Firebase, Agile Methodologies* | [View Presentation](#), [View Code](#)

- Collaborated with a team in an agile setting to build a mobile app that lets users find and organize pickup sports events, backed by Firebase with NoSQL data modeling for real-time, scalable reads and writes

SKILLS

- Languages:** Python, SQL, TypeScript, JavaScript, C, C++, C#, Java, PHP
- Data Stack:** Snowflake, PostgreSQL, ClickHouse, AWS, Dagster, dbt, Firebase, Pinecone
- Frameworks & Tooling:** Terraform, Git, GitHub Actions, Django, React/Next.js, Vue.js, Laravel, Jupyter Notebook
- Concepts:** ETL/ELT Pipelines, Data Modeling, Data Quality, Data Analytics, Distributed Systems, Cloud Data Warehousing, CI/CD, Blockchain, AI/ML, MCP, RAG, Agile Methodologies
